AI CAREERS FOR WOMEN

LINKEDIN FELLOWSHIP

From Raw data to Smart report – AI driven Business Intelligence

---

Project Domain

Excel with Copilot AI

A Collaborative Initiative

equipping students with practical skills in AI, Data Analytics, and Business Intelligence

by:

Student Name
Soniya Shree M S

Student Email
soniyashreesangeetha@gmail.com

Guide
Sagar Cheta

Institution:

Vel Tech Rangarajan Dr. Sagunthala R&D Institute of Science and Technology, School of Commerce

Year - 2026

3. Problem Statement

• Large volumes of financial data (revenues, profits, client metrics, attrition, EPS, dividends, etc.) are scattered across multiple quarterly reports, making them difficult to interpret.

• Investors, stakeholders, and analysts face challenges in accessing decade long performance insights due to fragmented and unstructured datasets.

• Manual report generation is time-consuming, error-prone, and lacks scalability when dealing with multi-dimensional datasets.

• Traditional BI tools require significant effort in cleaning, formatting, and structuring data before meaningful insights can be extracted.

• Inconsistent formats (currency, percentages, date labels) and missing values reduce the reliability of analysis.

• Lack of automation leads to delays in decision-making and hinders transparency in organizational performance reporting.

4. Objectives

o To collect and understand the structure of the dataset used in the project.

o To clean and preprocess raw data by removing duplicates, correcting formats, and handling missing values.

o To apply domain-specific analysis using Excel, Power BI, AI Chatbot, or Copilot.

o To build interactive dashboards or reports that clearly communicate insights.

o To leverage AI tools (Copilot/Chatbot) to automate or enhance the analysis and content generation process.

o To perform comparative quarter-by-quarter progression analysis of financial performance (net profit, EPS, client contribution, attrition) and visualize industry/geography splits for strategic decision-making.

5. Methodology / Implementation Plan

#	Phase	Description
1	**Data Collection & Exploration**	Obtain the quarterly financial report of TCS from its official website. Understand field names, data types, and row count to form an AI prompt projects, define the use case and target audience instead.
2	**Data Cleaning & Preprocessing**	Create new dataset using the financial reports with new headings(revenue by industry, attrition rate, net profit, etc.,).
3	**Analysis & AI Integration**	Analyse the reports downloaded from the websie with Copilot AI by forming a information deliverable prompt.
4	**Visualization / Output**	Build Power BI dashboard by using the dataset created.
5	**Documentation & Submission**	Write the project report, upload all files to a GitHub repository, and record a video demonstration. Submit the GitHub link, video link, and dashboard link (if applicable) for evaluation.

6. Resources and Timeline

A. Hardware & Software Requirements

- Laptop or PC — Intel Core i3 or higher, minimum 4 GB RAM (8 GB recommended)
- Operating System: Windows 10 / 11 or macOS
- Microsoft Excel (Microsoft 365 / Excel 2019 or later)
- Power BI Desktop — latest version (free download from Microsoft) — where applicable
- Microsoft Copilot — via Microsoft 365 subscription — where applicable
- Copilot AI chatbot — for prompt-based projects
- Internet connection — required for Copilot and AI Chatbot access
- Web browser — Google Chrome or Microsoft Edge (latest version)

B. Dataset

- The dataset is derived from the quarterly financial report of TCS.
- Source link: https://www.tcs.com/investor-relations/financial-statements
- The dataset is created manually with the help of Copilot AI.

- AI prompt used for this Project: “Analyze the FY11 Q1 TCS Analyst Presentation and provide the exact weighted percentage values of BFSI, Retail, Manufacturing, Hi-Tech, and Others under each geography (India, North America, UK, Continental Europe, Latin America, Asia Pacific, MEA). Then, list the consolidated totals for Net Profit, EPS, Dividend, Stock Splits, Stock Price, Market Cap, Employees, Attrition, and Clients. Present the output in the format where each country is a head and BFSI, Retail, Manufacturing, Hi-Tech, and Others are sub-categories, followed by the financial and operational totals. Include the active clients, new clients and client contribution rate in the client details. give the exact numeric value of active and new clients and client contribution rate in percentage. give the values of money in INR value. also include annual return rate with the detail of increase or decrease. add annual return rate after the stock price."

C. Project Timeline

A simple table showing planned tasks and expected completion dates.

Phase	Task	Tentative Completion Date
1	Dataset collection, exploration, and understanding	*Week 1*
2	Data cleaning, preprocessing, and validation / Prompt design	*Week 2*
3	Analysis, AI tool integration (Copilot / Chatbot), and insight generation	*Week 2 – 3*
4	Dashboard / output build, testing, and review	*Week 3*
5	Report writing, GitHub upload, and video recording and submission	*Week 4*

7. Expected Outcomes / Conclusion

- The major finding in the period of study is the financial position and competitiveness of the organization is stable and are having a healthy growth over the decade.
- Even some fluctuations are seen at the organizations financial position in the years of 2016 to 2021 in the revenue growth percentage, it has maintained its growth over further year in a well manner.
- The organization has a conserved HR management over the research study period which is proven by the attrition rate.
- It has become a trustworthy organization by proving the goodwill in the replication of gradual increase in the share value and market value.
- The rising market capitalization value indicates the stocks and growth extended by the organization over the FY11 to FY26.
